The after Sales Service is recognized as an important ingredient of our operations and we believe in Total Customer Satisfaction. We give due importance to this aspect that it deserves at the highest levels in our organization.

Quality Assurance

We at SLVR Aircomfort systems have adopted several methods for quality control. The construction quality control process will comprise of storage of material, standard of workmanship, testing and checking of works. In more specific terms, special focus will be given in terms of quality control for piping, ducting and insulation work, which are highly labour oriented activities. To ensure right quality there will be trained supervisors and foremen who will be deployed by us would be capable of controlling the quality of work.

We are achieving cost effective system design with quality execution in time by implementing following,

- a) Effective organization structure in place - planning, engineering, purchase, execution, commercial, finance & HR departments with clear accountability.
- b) Effective project management process in place – from kick off meeting to handing over.
- c) Flexible & accurate design / revisions of design & documentation in place– through Auto CADD & HAP software
- d) Effective implementation of safety in working environments in place – through planning & hr audits
- e) 100% compliance of statutory documents in place - through HR system
- f) Effective QC at site in place - through Engg system & validation procedure

Health & Safety Plan

We have a detailed health and safety plan indicating detailed construction safety, personnel safety, workmen qualification, determination of Hazard protection, emergency planning etc.

As a management responsibility, we wish to highlight the following:

- Prevention of all injuries and occupational diseases
- Health and safety is a line management responsibility
- Health and safety are of equal importance to other business objectives
- Creation of a safe and healthy work environment
- Establishment of safe and healthy working practices
- Creating interest and enthusiasm in health and safety
- Developing personal responsibility for health & safety

TEAM

We have sales team with minimum Engineering background, who understands the all the technical aspects of project & capable of handling it from the beginning of the project.

The design engineers & draftsmen who are professionally trained in their field & handled by capable leaders with years of technical expertise. Our team works on AUTO CAD for the preparation of detailed drawings,

Our procurement team is headed by manager with 2 supporting people. Procurement team has a robust system & process in place which helps in delivering quality products on time with clear tracking details of the materials
